Metal lockers made sense before better options existed. Now that heavy duty plastic lockers made from heavy duty polyethylene are available in a full range of configurations, the case for choosing metal in most Australian facilities is getting harder to make. OzLoka® Australia has supplied plastic locker solutions to schools, gyms, aquatic centres, healthcare facilities, and workplaces across the country. The facilities that switch rarely go back.

## Where Heavy Duty Plastic Lockers Make the Biggest Difference

Gyms and aquatic centres are the clearest example. Moisture is constant, and metal lockers in those environments are fighting a losing battle from day one. But the advantage of **heavy duty plastic lockers** extends well beyond wet areas. Schools dealing with physical abuse from students, hospitals needing surfaces that can be cleaned thoroughly, and industrial facilities where impact and humidity both feature all benefit from a material that simply does not corrode, warp, or need repainting on a cycle.

- Available in single tier, two tier, and multi tier options for any facility layout
- Multiple locking options including key lock, combination, and padlock ready configurations
- Suitable for wet areas including pool change rooms, beach facilities, and healthcare settings
- Colour options to match facility aesthetics or support organisational zone colour coding
- Structurally strong enough for high traffic environments with hundreds of daily users
- Used across schools, gyms, aquatic centres, healthcare, and industrial settings nationally

## **Our Heavy Duty Plastic Lockers Are Built to Go the Distance**

The long term cost of metal lockers in demanding environments adds up fast. Repainting, hinge replacements, door realignments, and full replacement cycles eat into facility budgets year after year. OzLoka® Australia heavy duty plastic lockers are engineered around avoiding all of that. No coating to maintain, no corrosion process to manage, no annual assessment of what needs replacing next. Facilities that switched to OzLoka® Australia plastic heavy duty lockers years ago are still running the same installations without significant intervention.

- Consistent product availability means additions and replacements are straightforward to source
- Low ongoing maintenance costs across the full lifespan of each installation
- Heavy duty polyethylene construction eliminates the rust and maintenance cycle entirely
- Long product lifespan reduces total cost of ownership significantly compared to metal alternatives

## **See What Our Heavy Duty Plastic Lockers Can Do for Your Facility**
